

Packaging Trim Removal Systems

WE KEEP THINGS MOVING FORWARD

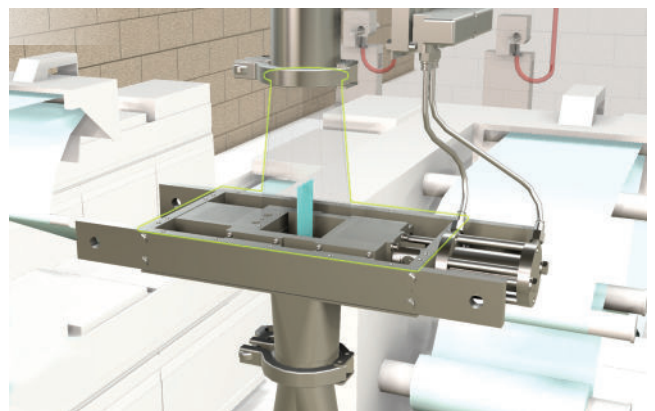

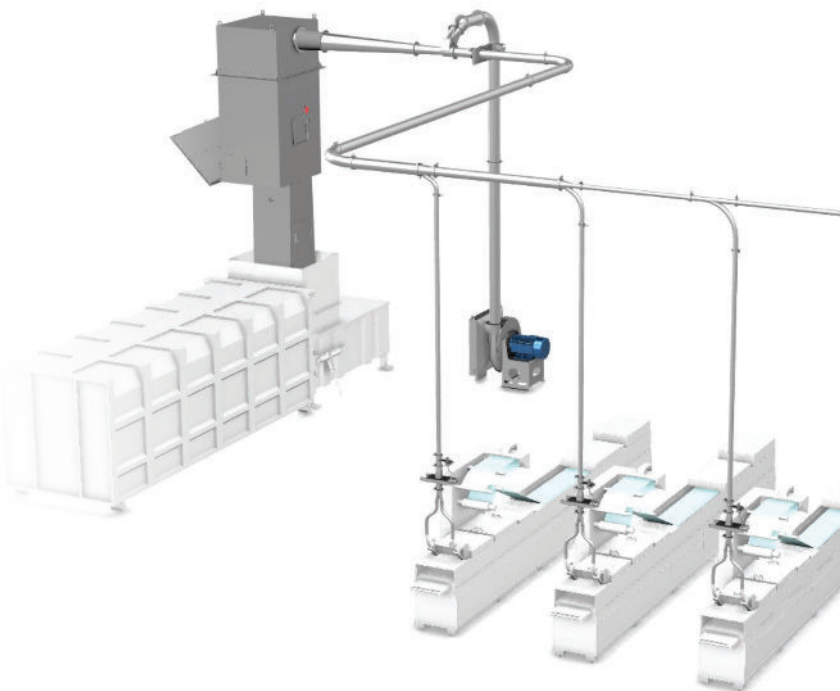

Convey Trim from Multiple Packaging Lines Without Labor or Interrupting Your Process

Quickdraft's pneumatic conveying systems are designed to consistently remove packaging trim waste out of your packaging room without the use of labor, without canisters and without interrupting your packaging process.

This is an excellent solution to reduce labor costs and increase production uptime, especially for processors with multiple packaging lines. No need to manually empty packaging trim canisters or to handle trim rolls and you can improve food and employee safety by eliminating cart traffic from the packaging room to the compactor area.

PACKAGING TRIM REMOVAL SYSTEM BENEFITS

- No moving components in the conveying duct
- Extremely dependable, low maintenance
- Custom designed for each application
- Operate problem-free 24/7
- Improve food and employee safety

Trim Cutter

Packaging Trim Removal Systems

Increase Uptime and Get Your Trim Where You Want it Without Labor Input

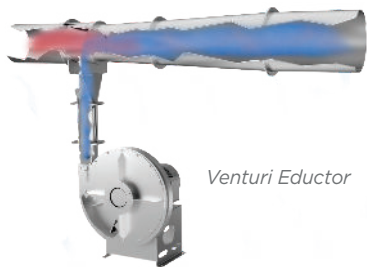

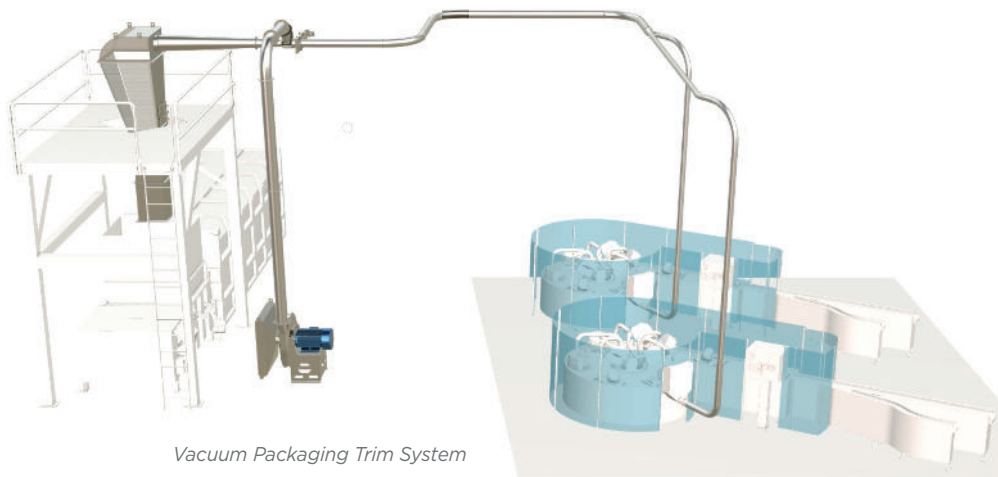

TRIM CUTTERS

Our trim cutters are designed to index with your packaging machine, which eliminates any chance of plugging.

- Cuts continuous trim into pieces
- Integral controls actuate trim cutter to index with the packaging machine
- Single acting cylinder for stability
- All stainless steel construction with an open, cleanable design

Powered by our venturi eductor and blower located outside of the processing room, noise levels are much lower. Venturi technology allows material to be conveyed without an impeller in the material conveying path which makes the system extremely dependable. The blower handles ambient air which results in a low maintenance system that works equally well with both packaging and vacuum packaging equipment.

Packaging trim can be continuously conveyed outside of your plant and dropped into a compactor without any labor input. Ductwork can be located above the processing floor so that valuable floor space is maximized.
